REC_DS using C_Week 4_MCQ_Updated

Attempt : 1
Total Mark : 20
Marks Obtained : 8

Section 1 : MCQ

1. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
typedef struct {
    int arr[MAX_SIZE];
    int front;
    int rear;
    int size;
} Queue;
```

```
void enqueue(Queue* queue, int data) {
    if (queue->size == MAX_SIZE) {
        return;
    }
    queue->rear = (queue->rear + 1) % MAX_SIZE;
```

```

    queue->arr[queue->rear] = data;
    queue->size++;
}
int dequeue(Queue* queue) {
    if (queue->size == 0) {
        return -1;
    }
    int data = queue->arr[queue->front];
    queue->front = (queue->front + 1) % MAX_SIZE;
    queue->size--;
    return data;
}
int main() {
    Queue queue;
    queue.front = 0;
    queue.rear = -1;
    queue.size = 0;
    enqueue(&queue, 1);
    enqueue(&queue, 2);
    enqueue(&queue, 3);
    printf("%d ", dequeue(&queue));
    printf("%d ", dequeue(&queue));
    enqueue(&queue, 4);
    enqueue(&queue, 5);
    printf("%d ", dequeue(&queue));
    printf("%d ", dequeue(&queue));
    return 0;
}

```

Answer

Status : Skipped

Marks : 0/1

2. Which of the following can be used to delete an element from the front end of the queue?

Answer

Status : Skipped

Marks : 0/1

3. The process of accessing data stored in a serial access memory is similar to manipulating data on a

Answer

Status : Skipped

Marks : 0/1

4. What will the output of the following code?

```
#include <stdio.h>
#include <stdlib.h>
typedef struct {
    int* arr;
    int front;
    int rear;
    int size;
} Queue;
Queue* createQueue() {
    Queue* queue = (Queue*)malloc(sizeof(Queue));
    queue->arr = (int*)malloc(5 * sizeof(int));
    queue->front = 0;
    queue->rear = -1;
    queue->size = 0;
    return queue;
}
int main() {
    Queue* queue = createQueue();
    printf("%d", queue->size);
    return 0;
}
```

Answer

Status : Skipped

Marks : 0/1

5. After performing this set of operations, what does the final list look to contain?

```
InsertFront(10);
InsertFront(20);
InsertRear(30);
DeleteFront();
InsertRear(40);
InsertRear(10);
DeleteRear();
InsertRear(15);
display();
```

Answer

Status : Skipped

Marks : 0/1

6. When new data has to be inserted into a stack or queue, but there is no available space. This is known as

Answer

overflow

Status : Correct

Marks : 1/1

7. What is the functionality of the following piece of code?

```
public void function(Object item)
{
    Node temp=new Node(item,trail);
    if(isEmpty())
    {
        head.setNext(temp);
        temp.setNext(trail);
    }
    else
    {
        Node cur=head.getNext();
        while(cur.getNext()!=trail)
        {
            cur=cur.getNext();
        }
    }
}
```

```
}  
    cur.setNext(temp);  
}  
size++;  
}
```

Answer

Status : Skipped

Marks : 0/1

8. Insertion and deletion operation in the queue is known as

Answer

Enqueue and Dequeue

Status : Correct

Marks : 1/1

9. In what order will they be removed If the elements "A", "B", "C" and "D" are placed in a queue and are deleted one at a time

Answer

ABCD

Status : Correct

Marks : 1/1

10. Which operations are performed when deleting an element from an array-based queue?

Answer

Status : Skipped

Marks : 0/1

11. Which one of the following is an application of Queue Data Structure?

Answer

All of the mentioned options

Status : Correct

Marks : 1/1

12. The essential condition that is checked before insertion in a queue is?

Answer

Overflow

Status : Correct

Marks : 1/1

13. In a linked list implementation of a queue, front and rear pointers are tracked. Which of these pointers will change during an insertion into a non-empty queue?

Answer

Status : Skipped

Marks : 0/1

14. In linked list implementation of a queue, the important condition for a queue to be empty is?

Answer

FRONT is null

Status : Correct

Marks : 1/1

15. Front and rear pointers are tracked in the linked list implementation of a queue. Which of these pointers will change during an insertion into the EMPTY queue?

Answer

Status : Skipped

Marks : 0/1

16. What does the front pointer in a linked list implementation of a queue contain?

Answer

The address of the last element

Status : Wrong

Marks : 0/1

17. A normal queue, if implemented using an array of size MAX_SIZE, gets full when

Answer

Front = (rear + 1)mod MAX_SIZE

Status : Wrong

Marks : 0/1

18. What will be the output of the following code?

```
#include <stdio.h>
#include <stdlib.h>
#define MAX_SIZE 5
typedef struct {
    int* arr;
    int front;
    int rear;
    int size;
} Queue;
Queue* createQueue() {
    Queue* queue = (Queue*)malloc(sizeof(Queue));
    queue->arr = (int*)malloc(MAX_SIZE * sizeof(int));
    queue->front = -1;
    queue->rear = -1;
    queue->size = 0;
    return queue;
}
int isEmpty(Queue* queue) {
    return (queue->size == 0);
}
int main() {
    Queue* queue = createQueue();
```

```
printf("Is the queue empty? %d", isEmpty(queue));  
return 0;  
}
```

Answer

Status : Skipped

Marks : 0/1

19. What are the applications of dequeue?

Answer

All the mentioned options

Status : Correct

Marks : 1/1

20. Which of the following properties is associated with a queue?

Answer

First In First Out

Status : Correct

Marks : 1/1

REC_DS using C_Week 4_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 0

Section 1 : Coding

1. Problem Statement

Imagine a bustling coffee shop, where customers are placing their orders for their favorite coffee drinks. The cafe owner Sheeren wants to efficiently manage the queue of coffee orders using a digital system. She needs a program to handle this queue of orders.

You are tasked with creating a program that implements a queue for coffee orders. Each character in the queue represents a customer's coffee order, with 'L' indicating a latte, 'E' indicating an espresso, 'M' indicating a macchiato, 'O' indicating an iced coffee, and 'N' indicating a nabob.

Customers can place orders and enjoy their delicious coffee drinks.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Enqueue the coffee order into the queue. If the choice is 1, the following input is a space-separated character ('L', 'E', 'M', 'O', 'N').

Choice 2: Dequeue a coffee order from the queue.

Choice 3: Display the orders in the queue.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the queue:

If the choice is 1:

1. Insert the given order into the queue and display "Order for [order] is enqueued." where [order] is the coffee order that is inserted.
2. If the queue is full, print "Queue is full. Cannot enqueue more orders."

If the choice is 2:

1. Dequeue a character from the queue and display "Dequeued Order: " followed by the corresponding order that is dequeued.
2. If the queue is empty without any orders, print "No orders in the queue."

If the choice is 3:

1. The output prints "Orders in the queue are: " followed by the space-separated orders present in the queue.
2. If there are no orders in the queue, print "Queue is empty. No orders available."

If the choice is 4:

1. Exit the program and print "Exiting program"

If any other choice is entered, the output prints "Invalid option."

Refer to the sample output for the exact text and format.

Sample Test Case

Input: 1 L

1 E

1 M

1 O

1 N

1 O

3

2

3

4

Output: Order for L is enqueued.

Order for E is enqueued.

Order for M is enqueued.

Order for O is enqueued.

Order for N is enqueued.

Queue is full. Cannot enqueue more orders.

Orders in the queue are: L E M O N

Dequeued Order: L

Orders in the queue are: E M O N
